Trade Show Information - 2017

E/M Wave will once again participate as a vendor at the 2017 CMA Conference in Tampa Nov. 7-9. We look forward to seeing all our business partners and friends. Additional industry-related trade shows remaining in 2017 include:

Exhibit Date	Event	Location
Aug. 13 - 16	APCO International Conference	Denver, CO
Sept. 14	Northern CA APCO Vendor Showcase	Pleasanton, CA
Sept. 17 - 19	R.S.S.I. Railway Interchange	Indianapolis, IN
Oct. 26	CPRA Southern CA Vendor Tabletop	Montebello, CA
Nov. 7 - 9	CMA 2017 Communications Marketing Assoc.	Tampa, FL

EM-BFG11905 - Fiberglass Base Station Antenna

5 dBi 902-928 MHz Fiberglass Base Station Antenna

- 26 MHz Bandwidth
- High Power Rating
- DC Grounded
- High Quality Brass Elements
- Filament Wound Fiberglass Radome
- SCADA and ISM Applications

This new series of base station antennas are built for quality minded, value oriented customers who demand rugged Omni's for ISM and SCADA applications. The antenna includes all mounting bracket hardware required to support installations to vertically mounted 3/4 to 1-1/2 inch pipe. The rugged nature of the EM-BFG11905 integrates a filament wound fiberglass radome, providing wind speed rating at 130 mph, with a safety factor of 1.65. The antenna is ventilated and incorporates direct DC grounding, preventing condensation build-up and static discharge or high E-field spikes from nearby lightning strikes. The Omni base station series is a new product category for E/M Wave, expanding our offering into additional bands and gain options for our customer base station and fixed point applications.

NEW

EM-BGT13005 GPS/GLONASS - Timing Antenna

E/M Wave's GPS Navigation product lines now include the EM-BGT13005 GPS/GLONASS Timing Antenna. The EM-BGT13005 provides exceptional environmental ingress protection, directly mounting to a standard 3/4 inch pipe. The antenna also accommodates mounting to a standard 1"-14 marine mount. High selectivity RF performance is achieved by incorporating dual filter architecture with up to 70 dB rejection, preventing signal interference while tracking GPS/GLONASS constellations. Vibration resistance and 15kV ESD protection are additional design features included for extreme environmental installations. The antenna is offered in a light gray color with an aero configuration reducing visibility, vandalism and snow/ice loading.

E/M Wave Portable Replacement Antenna Brochure

E/M Wave is nearing completion on the art work and layout for a separate self-contained brochure that will focus exclusively on Portable Replacement Antenna options. The new brochure will identify all E/M Wave portable replacement antenna offerings, to include specifications as well as individual images of the numerous connector interface options. We are targeting early September for the release of this new brochure. Please stay tuned for more information about our new portable antenna brochure.

2017 C.M.A. Conference - Tampa, FL

E/M Wave will once again be participating in this year's CMA Conference Nov. 7-9 in Tampa. As usual, we will be conducting two training sessions. In addition to the new portable brochure, we will be providing updates on new E/M Wave products and Engineering projects. The annual CMA Conference is an ideal opportunity for manufacturer's and their representatives to gather in a more intimate setting than the large trade shows, providing an open forum for discussion. We hope to see everyone in Tampa this year, and please plan to share your ideas with our entire sales team.

Cliff Chang - 2016 International Marketing Intern

E/M Wave was sad to say goodbye recently to our colleague Cliff Chang, who spent the past year assisting in numerous ways. Cliff has returned to his native Taiwan to fulfill his military obligation, and we are all confident he will serve with the same class and dignity he did with E/M Wave. He was instrumental in helping to expand our marketing efforts, and is the person responsible for E/M Wave taking that next step into social media exposure. It's amazing how much I personally learned from Cliff in the 12 months he worked with us, and admit to feeling challenged in his absence. Everyone at E/M Wave thanks him for his dedication and hard work during the past year, and wish him continued success in all his future ventures. Who knows, maybe we'll be fortunate enough to work with him again at E/M Wave in the near future. Best of luck Cliff, thanks for everything!
