www.deviserinstruments.com

Deviser Instruments develops handheld test and measurement solutions for the installation, qualification, maintenance and troubleshooting of communications networks. Deviser develops products that are simple, configurable and scalable with core expertise embodied in an array of products that test Wireless, Fiber Optic, Ethernet and Broadband/CATV networks. Deviser's wireless solutions address the four major test points that converge in today's wireless network: RF coaxial cables, fiber optics, Ethernet backhaul and complex RF signals. Our wireless products test RF/Optic cable feedline and antenna systems; DAS, FTTA and FTTC fiber optic systems; spectrum, complex RF signal and interference analysis; coverage mapping (indoor & outdoor), etc.
